Lagos, Nigeria

Summary

DevOps Engineer and Cloud Infrastructure Architect with 4+ years of experience building the "engine" for high-growth tech companies. Specializes in Speed (DevOps), Security (DevSecOps), and Cost Efficiency (FinOps). Proven track record of reducing deployment failures by 90%, hardening security for multi-tenant environments, and cutting cloud costs through automated infrastructure and rigorous observability.

Technical Skills

- **Cloud & Infrastructure:** AWS (EKS, ECS, VPC, WAF, GuardDuty), Azure, DigitalOcean, Terraform (IaC), CloudFormation, Ansible, Render
- **CI/CD & Automation:** GitLab CI, GitHub Actions, Jenkins, ArgoCD (GitOps), Fastlane (Mobile Automation), Helm, Gradle, Ant (Build Lifecycle Management)
- **Containerization:** Kubernetes (EKS/AKS), Docker, Istio (Service Mesh), RabbitMQ
- **Security (DevSecOps):** SonarQube, Trivy, Checkov, HashiCorp Vault, AWS KMS, Cloudflare Access (SSO), Okta, PCI DSS, ISO 8583, SOC2, ISO 27001
- **Observability (FinOps):** Prometheus, Grafana, Datadog, ELK Stack, Dynatrace, Nagios
- **Scripting & Backend:** Bash, Python, YAML, Node.js, SQL, Java (JVM Tuning)

Professional Experience

Thefriendsofgod (Foundation) | Remote

Lead DevOps & QA Engineer (Volunteer) | Jan 2026 – Present

- Architected a highly scalable microservices infrastructure designed for "elasticity," allowing for rapid resource scaling with minimal downtime during peak demand.
- Spearheaded cross-functional collaboration between Web Development and design teams, to coordinate and optimize internal response times for technical assistance and service tickets.
- Conducting R&D for an internal "**PeopleOps**" productivity platform (**similar to PeopleHum**) to automate task allocation, milestone tracking, and team culture notifications.
- Developed Python-based automated monitoring scripts to verify service availability and health without manual site interaction.
- Engineered a secure backend environment by implementing infrastructure-level hardening and performance optimization strategies.

Hi-Visual IT Agency | Remote

DevOps Engineer (Contract & Ongoing Freelance) | Nov 2024 – Present

Initially a 10-month contract; retained on an ongoing freelance basis to lead infrastructure strategy.

- Lead infrastructure strategy and perform recurring security audit checks; proactively remediating vulnerabilities based on industry best-practice rules (CIS Benchmarks, OWASP).
 - Designed scalable pipelines using GitLab CI and automated Fastlane releases for iOS and Android, delivering reproducible builds and eliminating release-day errors.
 - Engineered Python-based health-check scripts to monitor EC2 availability and automated hourly S3 data backups via Cron jobs.
 - Architected AWS ECS and Kubernetes environments, implementing RBAC and network policies to enforce strict multi-tenant isolation for diverse client workloads.
 - Built Prometheus and Grafana monitoring stacks to provide real-time visibility into infrastructure health, significantly reducing incident response times.
 - Automated cloud provisioning and security best practices, enabling the agency to onboard new clients with secure, production-ready environments in hours rather than weeks.
 - Designed and deployed AI-powered chatbot systems on client websites, reducing reliance on human customer support agents and significantly increasing response speed for common customer inquiries and workflows.
-

McCoy Development USA | Remote

DevOps Engineer (Contract) | Dec 2023 – Sep 2024

- Shortened release cycles by 35% by architecting GitLab CI/CD pipelines from the ground up for backend and web teams.
 - Slashed environment setup time by 50% through full AWS automation using Terraform, integrated with Checkov to enforce compliance before deployment.
 - Delivered predictable, zero-downtime Kubernetes releases using Helm charts and custom rollback mechanisms for mission-critical workloads.
 - Hardened security posture by integrating SonarQube, Trivy, and Cloudflare Access (SSO)—tied to Okta—directly into the build pipeline.
 - Improved incident response by 20% by designing a custom Prometheus + Grafana alerting setup.
 - Optimized Java build logic and dependency management using Gradle, reducing CI overhead and shortening release cycles by 35%.
-

Omenor Tech | Lagos State, Nigeria

DevOps Engineer | Feb 2022 – Oct 2023

- Cut deployment failures by 90% by replacing manual processes with automated pipelines via Jenkins, GitHub Actions, and GitLab.
- Reduced mobile release times by 60% using Fastlane, and streamlined Kubernetes rollouts by 40% with Helm and ArgoCD.
- Expanded security posture with Vault and KMS for secrets management, and enforced Git pre-commit hooks for safer merges.

- Reduced cross-service latency by 35% by implementing Istio sidecar mesh for traffic routing and fault tolerance.
 - Aligned infrastructure with ISO 8583 & PCI DSS standards to ensure regulatory compliance for fintech workloads, monitoring uptime via Nagios and Dynatrace.
-

Cyclobold Tech | Lagos State, Nigeria

Linux System Administrator (Intern) | Jul 2021 – Dec 2021

- Created shell scripts for user accounts and system setups, cutting manual setup time by 90%.
 - Strengthened server security and set up central logging for easier monitoring and auditing.
 - Managed production Linux servers and maintained legacy Java build environments using Ant, implemented Docker for workload isolation, paving the way for DevOps adoption.
-

Education

Higher National Diploma (HND), Mass Communication/Media Studies

Lagos State University of Science and Technology (Formerly Lagos State Polytechnic)
2018 – 2021

Grade: Upper Credit
